# VAV terminal units Type TVM

Variant TVM-S

Rectangular connection on the room end

Circular connection on the fan end

Tested to VDI 6022

### For dual duct systems

VAV dual duct terminal units for dual duct systems with variable volume flows in buildings with demanding acoustic requirements

- Individual temperature control for each room or zone
- Highly effective integral attenuator
- Electronic control components for different applications (Compact and Universal)
- Suitable for airflow velocities up to 13 m/s
- Closed blade air leakage to EN 1751, up to class 4
- Casing air leakage to EN 1751, class A

### Optional equipment and accessories

- Acoustic cladding for the reduction of case-radiated noise
- Secondary silencer Type TS for the reduction of air-regenerated noise

#### Application

#### Application

- VARYCONTROL VAV dual duct terminal units of Type TVM for the supply air control in dual duct variable or constant air volume systems
- Closed-loop volume flow control using an external power supply
- For maximum acoustic and thermal comfort
  - Demand-based mixing of cold and warm air
     Shut-off by means of switching (equipment supplied by others)

### **Special characteristics**

 Integral differential pressure sensor with 3 mm measuring holes (resistant to dust and

### pollution)

- Integral attenuator with at least 26 dB insertion loss at 250 Hz
- Factory set-up or programming and aerodynamic function testing
- Volume flow rate can later be measured and adjusted on site; additional adjustment device may be necessary
- Inspection access for cleaning to VDI 6022

### Nominal sizes

- TVM-S: 125, 160, 200
- TVM: 125, 160, 200, 250, 315, 400

#### Description

### Variants

- TVM-S Dual duct unit, 60° spigot arrangement
   TVM-S-D Dual duct unit with acoustic cladding, 60° spigot arrangement
- TVM: Dual duct unit, 90° spigot arrangement
- TVM-D: Dual duct unit with acoustic cladding,
- 90° spigot arrangementUnits with acoustic cladding and/or secondary
- silencer Type TS for very demanding acoustic requirements
- Acoustic cladding cannot be retrofitted

### Parts and characteristics

- Ready-to-commission unit which consists of mechanical parts and control components.
- Averaging differential pressure sensors for volume flow rate measurement, one in the cold air spigot and one in the silencer
- Damper blade
- Integral attenuator
- Inspection access
- Factory assembled control components complete with wiring and tubing
- Aerodynamic functional testing on a special test rig prior to shipping of each unit
- Set-up data is given on a label or volume flow rate scale affixed to the unit
- High control accuracy (even with upstream bend R = 1D)

### **Attachments**

- Compact controller: Compact unit consisting of controller, differential pressure transducer and actuator
- Universal controller: Controller, differential pressure transducer and actuators for special applications

### Accessories

Lip seals (factory fitted)

### **Useful additions**

- Secondary silencer Type TS

### **Construction features**

- Rectangular casing
- Spigot on the fan end suitable for circular ducts to EN 1506 or EN 13180
- Spigot with groove for lip seal
- Connection on the room end suitable for air duct profiles
- Baffle plate is fitted after the damper blade for optimum aerodynamic performance
- Position of the damper blade indicated externally at shaft extension
- Thermal and acoustic insulation (lining)

### Materials and surfaces

- Casing and damper blade made of galvanised sheet steel
- Damper blade seal made of TPE plastic

### 11/2017 - DE/en

- Lining is mineral wool
- Differential pressure sensor made of aluminium
- Plastic bearings

### Variant with acoustic cladding (-D)

- Acoustic cladding made of galvanised sheet steel
- Lining is mineral wool
- Rubber elements for the insulation of structureborne noise

### Mineral wool

- To EN 13501, fire rating class A1, noncombustible
- RAL quality mark RAL-GZ 388
- Biosoluble and hence hygienically safe according to the German TRGS 905 (Technical Rules for Hazardous Substances) and EU directive 97/69/EG
- Faced with glass fibre fabric as protection against erosion through airflow velocities of up

### to 20 m/s

- Inert to fungal and bacterial growth

#### **Standards and guidelines**

- Hygiene conforms to VDI 6022
- VDI 2083, air cleanliness class 3, and US standard 209E, class 100
- Closed blade air leakage to EN 1751, class 4 (nominal sizes 125 and 160, class 3).
- Nominal sizes 125 and 160 meet the general requirements, nominal sizes 200 – 400 meet the increased requirements of DIN 1946, part 4, with regard to the acceptable closed blade air leakage
- Casing air leakage to EN 1751, class A

### Maintenance

 Maintenance-free as construction and materials are not subject to wear

### **Functional description**

The VAV terminal unit is fitted with two differential pressure sensors for measuring the volume flow rates, one in the cold air flow and one in the total air flow.

The control components (attachments) include two differential pressure transducers that transform the differential pressure (effective pressure) into an electric signal, two controllers, and two actuators; the control functions can be achieved with a Compact controller or with individual components.

In most cases, the setpoint value for the dual duct terminal unit comes from a room temperature controller.

The room temperature controller 'leads' the cold air volume flow controller and alters the setpoint for the cold air flow rate between 0 and the

9 Damper blade - cold air
9 Differential pressure sensor - cold air
9 Differential pressure sensor - cold air
9 Control components, e. g. a Compact controller

### Schematic illustration of the TVM-S

maximum volume flow  $\dot{V}_{max}$ . The controller compares the actual value with the setpoint value and alters the control signal of the damper actuator if there is a difference between the two values.

The warm/total air controller is set to the minimum volume flow rate  $\dot{V}_{min}$  and controls the warm air damper blade. As a consequence, a corresponding proportion of warm air is added. As the demand for cooling increases, the warm air damper blade closes such that eventually only cold air flows.

An integral attenuator reduces the noise that is created by the restriction of the airflow. The airflow velocity at the room end is, due to the larger rectangular cross section, about half the velocity in the circular duct.

### Control loop

### **Control diagram**

### **Single operation**

### Slave operation (master-slave)

### Static differential pressure

TVM

Nominal sizes	125 – 400 mm
Volume flow rate range	45 – 1680 l/s or 162 – 6048 m³/h
Volume flow rate control range	Approx. 30 to 100 % of the nominal volume flow rate
Minimum differential pressure	120 Pa
Maximum differential pressure	1000 Pa
Operating temperature	10 – 50 °C

### Volume flow rate ranges

The minimum differential pressure of VAV terminal units is an important factor in designing the ductwork and in rating the fan including speed control.

Sufficient duct pressure must be ensured for all operating conditions and for all control units. The measurement points for fan speed control must be selected accordingly. depend on the nominal size and on the control component (attachment) that is installed. The table gives the minimum and maximum values for a VAV terminal unit. Some control components may only have a limited volume flow rate range. This applies in particular to control components with a static differential pressure transducer. For volume flow rate ranges for all control components refer to our Easy Product Finder design programme.

(2) TVM, TVM-S with secondary silencer TS

Quick sizing tables provide a good overview of the room sound pressure levels that can be expected. Approximate intermediate values can be interpolated. Precise intermediate values and spectral data can be calculated with our Easy Product Finder design programme. The first selection criteria for the nominal size are the actual volume flow rates  $\dot{V}_{min}$  and  $\dot{V}_{max}$ . The quick sizing tables are based on generally accepted attenuation levels. If the sound pressure level exceeds the required level, a larger air terminal unit and/or a silencer is required.

(2) TVM, TVM-S with secondary silencer TS

3 TVM-D, TVM-S-D

This specification text describes the general properties of the product. Texts for variants can be generated with our Easy Product Finder design programme.

Rectangular VAV dual duct terminal units for dual duct systems with variable and constant volume flows, available in 6 nominal sizes.

Connecting spigots for warm and cold air arranged at an angle of 90°. Up to nominal size 200 an angle of 60° is also possible, hence ideal for for the refurbishment of older systems with dual duct units.

High control accuracy (even with upstream bend R = 1D).

Ready-to-commission unit which consists of the mechanical parts and the electronic control components. Each unit contains two averaging differential pressure sensors for volume flow rate measurement, one in the cold air flow and one in the total air flow, two damper blades, and an integral attenuator. Factory-assembled control components complete with wiring and tubing. Differential pressure sensor with 3 mm measuring holes (resistant to dust and pollution)

On the fan end, spigot with groove for lip seal, suitable for connecting ducts to EN 1506 or EN 13180.

Room end suitable for the connection of air duct profiles.

Two baffle plates, one fitted after each damper blade for optimum acoustic and aerodynamic performance.

Casing with acoustic and thermal insulation. Position of the damper blade indicated externally at shaft extension.

Closed blade air leakage to EN 1751, class 4 (nominal sizes 125 and 160, class 3). Casing air leakage to EN 1751, class B. Complies with VDI 2083, clean room class 3, and US standard 209E, class 100. Hygiene complies with VDI 6022, DIN 1946, part 4, as well as

EN 13779 and VDI 3803.

### **Special characteristics**

- Integral differential pressure sensor with 3 mm measuring holes (resistant to dust and pollution)
- Integral attenuator with at least 26 dB insertion loss at 250 Hz
- Factory set-up or programming and aerodynamic function testing
- Volume flow rate can later be measured and adjusted on site; additional adjustment device may be necessary
- Inspection access for cleaning to VDI 6022

### Materials and surfaces

 Casing and damper blade made of galvanised sheet steel

- Damper blade seal made of TPE plastic
- Lining is mineral wool
- Differential pressure sensor made of aluminium
- Plastic bearings

Variant with acoustic cladding (-D)

- Acoustic cladding made of galvanised sheet steel
- Lining is mineral wool
- Rubber elements for the insulation of structureborne noise

### Mineral wool

- To EN 13501, fire rating class A1, noncombustible
- RAL quality mark RAL-GZ 388
- Biosoluble and hence hygienically safe according to the German TRGS 905 (Technical Rules for Hazardous Substances) and EU directive 97/69/EG
- Faced with glass fibre fabric as protection against erosion through airflow velocities of up to 20 m/s
- Inert to fungal and bacterial growth

### **Technical data**

- Nominal sizes: 125 to 400 mm
- Volume flow rate range: 45 to 1680 l/s or 162 to 6048 m<sup>3</sup>/h
- Volume flow rate control range: approx. 30 – 100 % of the nominal volume flow rate
- Minimum differential pressure: 120 Pa
- Maximum differential pressure: 1000 Pa

### Attachments

Variable volume flow control with electronic Compact controller to switch an external control signal and an actual value signal for integration into the central BMS.

- Supply voltage 24 V AC/DC
- Signal voltages 0 10 V DC or 2 10 V DC
- Possible override controls with external switches using volt-free contacts: CLOSED, OPEN, V<sub>min</sub> and V<sub>max</sub>
- Volume flow rate control range: approx. 30 – 100 % of the nominal volume flow

### Sizing data

rate

- V<sub>warm, min</sub>-V<sub>warm, max</sub>[m<sup>3</sup>/h]
- $-\dot{V}_{cold, min} \dot{V}_{cold, max}[m^3/h]$
- Δp<sub>st</sub>[Pa]
- L<sub>PA</sub> air-regenerated noise[dB(A)]
- L<sub>PA</sub> Case-radiated noise[dB(A)]

### VAV dual duct terminal unit, variant TVM-S

VAV dual duct terminal unit, variant TVM

VAV dual duct terminal unit, variant TVM-S-D

### **TVM-S**

 VAV terminal unit for the control of variable supply air volume flows  Connecting spigots for warm and cold air arranged at an angle of 60°

#### TVM-S-D

- VAV terminal unit with acoustic cladding for the control of variable supply air volume flows
- Connecting spigots for warm and cold air arranged at an angle of 60°
- For rooms where the case-radiated noise of the

unit is not sufficiently reduced by a false ceiling

- The circular ducts for the room under consideration must have adequate acoustic insulation (provided by others) on the fan end
- Acoustic cladding cannot be retrofitted

### TVM

- VAV terminal unit for the control of variable supply air volume flows
- Connecting spigots for warm and cold air arranged at an angle of 90°

### TVM-D

- VAV terminal unit with acoustic cladding for the control of variable supply air volume flows
  - Connecting spigots for warm and cold air arranged at an angle of  $90^\circ$
- For rooms where the case-radiated noise of the

unit is not sufficiently reduced by a false ceiling

- The circular ducts for the room under consideration must have adequate acoustic insulation (provided by others) on the fan end
- Acoustic cladding cannot be retrofitted

### Detail of flange

### Installation and commissioning

- Any installation orientation
- Connecting spigots for warm and cold air arranged at an angle of 60° (TVM-S) or 90° (TVM)
- Return edges of the casing with drilled holes suitable for threaded rods

### **Upstream conditions**

The volume flow rate accuracy  $\Delta \dot{V}$  applies to a straight upstream section of the duct. Bends, junctions or a narrowing or widening of the duct cause turbulence that may affect measurement. Duct connections, e.g. branches off the main duct, must comply with EN 1505. Some installation situations require straight duct sections upstream.

## Space required for commissioning and maintenance

Sufficient space must be kept clear near any attachments to allow for commissioning and maintenance. It may be necessary to provide sufficiently sized inspection access openings.

### Bend

A bend with a centre line curvature radius of at least 1D – without an additional straight duct section upstream of the VAV terminal unit – has only a negligible effect on the volume flow rate accuracy.

#### Junction

A junction causes strong turbulence. The stated volume flow rate accuracy  $\Delta \dot{V}$  can only be achieved with a straight duct section of at least 5D upstream. Shorter upstream sections require a perforated plate in the branch and before the VAV terminal unit. If there is no straight upstream section at all, the control will not be stable, even with a perforated plate.

### **Principal dimensions**

#### ØD [mm]

VAV terminal units made of stainless steel: Outside diameter of the spigot VAV terminal units made of plastic: Inside diameter of the connecting spigot

**ØD**<sub>1</sub> [mm] Pitch circle diameter of flanges

ØD<sub>2</sub> [mm] Outside diameter of flanges

ØD<sub>4</sub> [mm] Inside diameter of the screw holes of flanges

L [mm] Length of unit including connecting spigot

Length of casing or acoustic cladding

**B [mm]** Duct width

**B**<sub>1</sub> [mm] Screw hole pitch of flange (horizontal)

### Acoustic data

**f**<sub>m</sub> **[Hz]** Octave band centre frequency

### L<sub>PA</sub> [dB(A)]

A-weighted sound pressure level of airregenerated noise of the VAV terminal unit, system attenuation taken into account

### L<sub>PA1</sub> [dB(A)]

A-weighted sound pressure level of airregenerated noise of the VAV terminal unit with secondary silencer, system attenuation taken into account

### **Definition of noise**

**B**<sub>2</sub> [mm] Outside dimension of flange (width)

B<sub>3</sub> [mm] Width of device

H [mm] Duct height

H<sub>1</sub> [mm] Screw hole pitch of flange (vertical)

H<sub>2</sub> [mm] Outside dimension of flange (height)

H<sub>3</sub> [mm] Unit height

n [] Number of flange screw holes

T [mm] Flange thickness

### m [kg]

Unit weight including the minimum required attachments (e.g. Compact controller)

### L<sub>PA2</sub> [dB(A)]

A-weighted sound pressure level of caseregenerated noise of the VAV terminal unit, system attenuation taken into account

### L<sub>PA3</sub> [dB(A)]

A-weighted sound pressure level of caseregenerated noise of the VAV terminal unit with acoustic cladding, system attenuation taken into account

All sound pressure levels are based on 20  $\mu$ Pa.

**Volume flow rates** 

V<sub>nom</sub> [m<sup>3</sup>/h] and [l/s] Nominal volume flow rate (100 %)

- The value depends on product type and nominal size
- Values are published on the internet and in technical leaflets, and stored in the Easy

### 11/2017 – DE/en **ТROX**®тесник

Product Finder design software.

- Reference value for calculating percentages (e.g. V<sub>max</sub>)
- Upper limit of the setting range and maximum volume flow rate setpoint value for the VAV terminal unit

### V<sub>min unit</sub> [m<sup>3</sup>/h] and [l/s]

- Technically possible minimum volume flow rate The value depends on product type, nominal
- size and control component (attachment) – Values are stored in the Easy Product Finder
- design software
- Lower limit of the setting range and minimum volume flow rate setpoint value for the VAV terminal unit
- Depending on the controller, setpoint values below V<sub>min unit</sub> (if V<sub>min</sub> equals zero) may result in unstable control or shut-off

### $\dot{V}_{max}$ [m<sup>3</sup>/h] and [l/s]

Upper limit of the operating range for the VAV terminal unit that can be set by customers

- V<sub>max</sub> can only be smaller than or equal to V<sub>nom</sub>
   In case of analog signalling to volume flow
- controllers (which are typically used), the set maximum value ( $\dot{V}_{max}$ ) is allocated to the

setpoint signal maximum (10 V) (see characteristic)

### V<sub>min</sub> [m<sup>3</sup>/h] and [l/s]

Lower limit of the operating range for the VAV terminal unit that can be set by customers

- $\dot{V}_{min}$  should be smaller than or equal to  $\dot{V}_{max}$
- Do not set V<sub>min</sub> smaller than V<sub>min unit</sub>, otherwise the control may become unstable or the damper blade may close
- V<sub>min</sub> may equal zero
- In case of analog signalling to volume flow controllers (which are typically used), the set minimum value (V<sub>min</sub>) is allocated to the setpoint signal minimum (0 or 2 V) (see characteristic)

### V [m<sup>3</sup>/h] and [l/s]

Volume flow rate

### Δ<sup>.</sup> [± %]

Volume flow rate tolerance from setpoint value

### **Δ**່V<sub>warm</sub> [± %]

Volume flow rate tolerance for the warm air flow of dual duct terminal units

### **Differential pressure**

### Δp<sub>st</sub> [Pa] Static differential pressure

### Δp<sub>st min</sub> [Pa]

Static differential pressure, minimum

 The static minimum differential pressure is equal to the pressure loss of the VAV terminal unit when the damper blade is open, caused by flow resistance (sensor tubes, damper mechanism)

#### Static differential pressure

- If the pressure on the VAV terminal unit is too low, the setpoint volume flow rate may not be achieved, not even when the damper blade is open
- Important factor in designing the ductwork and in rating the fan including speed control
- Sufficient duct pressure must be ensured for all operating conditions and for all terminal units, and the measurement point or points for speed control must have been selected accordingly to achieve this

### Construction

#### Galvanised sheet steel

- Casing made of galvanised sheet steel
- Parts in contact with the airflow as described for the product type
- External parts, e.g. mounting brackets or covers, are usually made of galvanised sheet steel

### Powder-coated surface (P1)

- Casing made of galvanised sheet steel, powder-coated RAL 7001, silver grey
- Parts in contact with the airflow are powdercoated or made of plastic
- Due to production, some parts that come into contact with the airflow may be stainless steel or aluminium, powder-coated
- External parts, e.g. mounting brackets or

### 11/2017 - DE/en

covers, are usually made of galvanised sheet steel

### Stainless steel (A2)

- Casing made of stainless steel 1.4201
- Parts in contact with the airflow are powdercoated or made of stainless steel
- External parts, e.g. mounting brackets or covers, are usually made of galvanised sheet
